

**Treasury Management Systems (TMS) – Buffet Module Special**

**Objective of the Course:** Completeness, accuracy and timeliness are the three tenets of robust transaction management - and it is in trading systems that they must be unambiguously evident. From deal capture and position management through to transaction processing and settlement, these solutions serve as systems of record and channels of mission critical data to multiple downstream processes.

As a result their accuracy and reliability are paramount; configurations must be accurate, interfaces robust and static data complete. Not only must they be stable, however, they must also be agile enough to incorporate new functionality demanded by market developments and regulatory requirements. Implementing and maintaining systems to these high standards requires knowledge, process and pedigree. Treasury Consulting LLP provides 100% Practical Trainings covering all aspects of Treasury Management Systems (TMS)
